

Report on Installation and Demonstration of Bee Boxes

The Department of Zoology, Raidighi College, successfully conducted the installation and demonstration of bee boxes in the college premises. This initiative was undertaken as part of the Zoology curriculum, with apiculture being an essential topic for both Honors and General students, as well as a key component of the department's Value-Added Course.

The event provided students with a hands-on experience in apiculture, a vital area of study that combines theoretical knowledge with practical application. The installation of the bee boxes was carried out under the guidance of faculty members, ensuring that students learned about the tools, techniques, and best practices for setting up and managing bee colonies.

During the demonstration, the students observed the behavior of bees, their role in pollination, and the importance of maintaining ecological balance. Faculty members explained the scientific and economic significance of beekeeping, highlighting its relevance to sustainable agriculture and biodiversity conservation.

The practical exposure not only enriched the students' understanding of apiculture but also encouraged them to consider its entrepreneurial prospects as a sustainable livelihood option.

The program concluded with an interactive session, where students actively participated by asking questions and discussing their observations. The initiative was highly appreciated by the attendees, who found the experience both educational and engaging.

This event marked another step forward in the Department of Zoology's commitment to integrating value-added learning with academic pursuits, empowering students with practical skills and a deeper appreciation for ecological sustainability.
